SUMMARY

Software Engineer with 3.5+ years of experience designing and shipping production systems with **React, Next.js, Node.js, Django, and PostgreSQL**. Builds **Brandhub** at The Branding Club, a B2B SaaS platform that runs suppliers, stock, orders, and payments for 8,000+ brands, owning features from business requirements through UI, APIs, and data. Focused on reliable systems, fast user experiences, and engineering practices that help the whole team ship faster. Previously delivered software for the National Stock Exchange (NSE) and Reliance Foundation.

EXPERIENCE

The Branding Club — Brandhub

Aug 2024 – Present

Software Engineer II (L2)

Mumbai, Maharashtra

- Designed how the Brandhub web app is built in **Next.js**, with shared components, predictable state, and clear page boundaries, giving the team a consistent foundation for a platform used by **8,000+ brands** across four European markets.
- Owned the ordering journey end-to-end, turning business requirements into the screens, **APIs**, and **business rules** that take a customer order from quote to delivery.
- Built the billing side of the platform so financial data stays trustworthy, keeping amounts, statuses, and generated invoice documents in sync from order to payment.
- Closed a risk where one user could change sensitive financial and order records alone by adding a second-person approval before changes take effect, trading one extra step for protection against costly mistakes.
- Built backend APIs with reliability in mind: secured access with authentication and protected routes, tuned slow database queries, and standardized error handling so failures are predictable and easy to debug.
- Tackled slow page loads as a product problem, cutting load time by **50%** and reaching **90+ Lighthouse** through lazy loading, leaner state, and faster forms, which contributed to a **55% lift in user retention**.
- Removed the need for emergency redeployments when a shipped feature misbehaved by letting the team switch any feature on or off without code changes, including an emergency off switch.
- Reduced time the team lost to repetitive debugging and review rework by introducing documentation-first, AI-assisted development (Claude, Codex, MCP) and automating **60% of bug resolution**.

Onelab Ventures

Mar 2023 – Aug 2024

Software Development Engineer I

Remote

- Delivered software for enterprise clients including **NSE-Corpository (National Stock Exchange)**, **RFIS (Reliance Foundation)**, and Complimate, owning work from requirement analysis through release.
- Strengthened a client admin panel by adding communication features, security controls, and API-backed data validation.
- Managed **on-premise deployments** for enterprise clients, meeting security compliance requirements and resolving production issues.
- Halved code duplication from **27% to 13%** by refactoring shared logic, making the codebase easier and safer to change, and ran performance assessments that improved speed and stability.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, HTML5, CSS3

Frontend: React.js, Next.js (SSR/SSG), Redux, Tailwind CSS, Material-UI, shadcn/ui, Storybook

Backend & APIs: Node.js (Express), Django / Django REST Framework, REST APIs, Authentication & Authorization

Databases: PostgreSQL, MongoDB, MySQL

AI & Automation: Claude, Codex, OpenAI API, Model Context Protocol (MCP), AI-assisted development, Figma-to-code automation

Tools & Practices: Git, GitHub, npm, Jira, B2B SaaS, performance optimization

PROJECTS

Sci-WebHub — Web Deployment and Hosting Platform | Next.js, Node.js, PostgreSQL

- Built backend services and the database schema for automated GitHub-based deployments, covering builds, deployment tracking, logs, and version history.

Bug Buster — AI-Powered Jira Automation Tool | OpenAI API, Jira API

- Built a tool that connects Jira with OpenAI APIs to analyze reported bugs and propose fixes, resolving **60% of issues automatically**.

ml-uikit — Reusable UI Component Library | React, Storybook, shadcn/ui | npm

- Built and published a React component library on npm, using Storybook for isolated development and testing, to standardize UI across multiple applications.

EDUCATION

U.I.E.T, C.S.J.M. University

Bachelor of Technology (B.Tech) in Computer Science

Aug 2019 – May 2023

Kanpur, Uttar Pradesh, India
