PROFESSIONAL SUMMARY

AI-focused full-stack engineer with 4 years of experience delivering production SaaS and LLM-enabled workflows. At The Branding Club, build BrandHub ordering, billing and API features and a production RAG assistant grounded in business data. Also independently built YourKhata and configured an AI-assisted job-application workflow.

TECHNICAL SKILLS

AI & Generative AI: LLM orchestration, RAG, vector search, LangChain, OpenAI/Gemini APIs, prompt engineering, agents, MCP
Languages & Backend: Python, TypeScript, JavaScript, SQL, Node.js, Express.js, Django, Django REST Framework, FastAPI, REST APIs
Frontend: React, Next.js SSR, Redux Toolkit, Tailwind CSS, Material UI, shadcn/ui, Storybook
Data & Delivery: PostgreSQL, MongoDB, MySQL, multi-tenant SaaS, Docker, Railway, Nginx, edge caching, Git/GitHub, CI/CD
SEO & GEO: Performance, Core Web Vitals, metadata, canonicals, sitemap/robots, FAQ JSON-LD, Search Console, GA4

PROFESSIONAL EXPERIENCE

Software Engineer II (L2) | The Branding Club Aug 2024 - Present

- Deliver ordering and billing workflows for BrandHub, a multi-tenant B2B order-management and fulfilment platform serving 8,000+ brands across four European markets.
- Own the customer ordering journey from quote to delivery, translating requirements into React/Next.js screens, APIs and clear business rules.
- Build billing features that keep order amounts, statuses and invoice documents consistent through the payment journey.
- Integrate TypeScript UIs with Node.js/Django REST APIs and PostgreSQL; improve authentication, protected routes, query performance and error handling.
- Collaborated on RAG/LLM content generation that cut manual content effort by 70%; built a production assistant over company records with vector-retrieved context and grounded natural-language answers.
- Reduced page load time by 50%, reached 90+ Lighthouse scores and contributed to a 55% retention lift through lazy loading, state and form improvements.
- Added two-person approvals and emergency feature flags for sensitive financial flows; introduced Claude/Codex/MCP workflows and automated 60% of routine bug-resolution tasks with review.

Software Development Engineer I | Onelab Ventures Mar 2023 - Aug 2024

- Delivered enterprise software for NSE-Corpository, Reliance Foundation RFIS and Complimate from requirements through release, on-premise deployment and production support.
- Built API-backed admin and communications workflows with security, validation and client-specific controls.
- Refactored shared logic, reducing code duplication from 27% to 13%, and resolved production issues across client environments.

SELECTED PRODUCT WORK

YourKhata | Independently Built Product Sep 2026 - Present

- Built the initial YourKhata product to bring customer, financial and operational records into one platform and reduce fragmented workflows.
- Implemented multi-tenant data separation for multiple businesses under one login, with role-based access and audit-traceable corrections to protect data and preserve reliable histories.
- Built with Next.js SSR, React, TypeScript, Redux Toolkit, Tailwind CSS, Python, Django REST Framework and PostgreSQL; deployed with Docker and Nginx.
- Achieved PageSpeed Insights scores of 99+ desktop and 90+ mobile through SSR, edge caching and technical SEO: metadata/canonicals, sitemap/robots controls, FAQ JSON-LD, Search Console and GA4.
- Used Claude Code, Codex and MCP for specification, implementation, debugging and test exploration; validated generated changes.

SELECTED PROJECTS

Generative AI Job Application Assistant Personal project

- Set up a self-hosted AI job-search app with Next.js/TypeScript, PostgreSQL/Prisma and Docker, using an open-source foundation. Configured provider-ready LLM workflows with structured profile/JD context, prompt engineering, fit/gap analysis and document drafting.
- Supports an optional scheduled job-search agent, structured outputs, application tracking and human-in-the-loop review; the candidate reviews every draft and submits applications manually.

ml-uikit | React Component Library Published on npm

- Built and published a reusable React/TypeScript component library on npm using shadcn/ui and Radix UI; owned typed APIs, theming, Storybook documentation and packaging.
- Developed phone, date-range, search, form, pagination, typography and sidebar components with dark-mode support.
- Configured ESM/CommonJS builds, declarations, dependency externalization and tree-shaking; added Storybook accessibility and Vitest/Playwright tests.

EDUCATION & LANGUAGES

B.Tech, Computer Science | U.I.E.T., C.S.J.M. University, Kanpur, India | 2019 - 2023
English (Professional)
Hindi (Native)
